

## Lab Two

Using the provided HTML you will need to style the text according to the below instructions (steps will be added to the HTML document in comments):

**Step 1:** Get two different fonts from Google fonts (not the ones we used in class).

**Step 2:** Using a grouped selector add one of the fonts to all the heading elements.

**Step 3:** Style the `<h1>`

- Adjust the size to 46px
- Adjust the letter spacing
- Center the text
- Change the font color to a color of your choosing

**Step 4:** Add the other font to all of the body text using a group selector.

**Step 5:** Add a span inside of the paragraph element, then change the color of the text in the span.

**Step 6:** Increase the size of the h3 and add a text shadow.

**Step 7:** Upload the lab folder to your GitHub. If you are in a pair make sure to add a comment listing the names of those who worked on the lab.
